

*Only the best for you!
We package our A.Vogel products in glass...
and there is no alternative.*

Glass packages mean high quality without compromise. There are major advantages a glass package has for our A.Vogel health care products compared to the conventional blister packages.

✓ **Glass is environmentally friendly**

Recovered glass is the most important resource for glass production today. Thanks to the recycling of glass, power consumption was cut by three quarter!

✓ **Glass seals tightly**

Glass guarantees that your products are safely protected and stay fresh. Above all, they remain with the highest quality even after long storage times.

✓ **Glass does not react**

Glass is a neutral packaging material. Interactions between content and package are not known. Glass does neither excrete nor absorb any substances.

✓ **Glass is likeable**

Glass stands for quality and naturalness. It is a precious, pure and clear material and is used for many applications. The great Phoenician culture produced the first glass.

And above all, glass fits to the freshness and pureness of our A.Vogel products and the philosophy of Alfred Vogel. Glass makes sense, for us and for you!
