

# HERBATINT®

## Find Your True Color

**Looking at a color chart, find the N color that is closest to your natural shade.** For the most accuracy compare with your roots and hairline.

**Now you can determine your natural level (the number).** The numbers run from 1-10. 1 is the darkest. 10 is the lightest.

**Herbatint is very low peroxide.** This provides enough lightening power to go one, possibly two shades lighter. The darker shades will lighten only one shade, i.e. if your natural level is 4 you can go up to a 5.

**Now you can choose a tone** (gold, red, natural brown or blonde). Remember for best results you can only use a tone that is at your level (number) or one higher or lower.

- N = Natural tones.** The N's give optimum coverage on gray or white hair. If you prefer to add a tone you must use some of the N (to completely cover your gray) to the tone you chose.
- R = Red.** The R's are a rich, cool based red, ideal for people with olive skin tones. They do not provide complete gray coverage alone.
- D = Gold Beige.** The D's provide natural looking golden brown or blonde highlights. They do not provide complete gray coverage alone.
- M = Mahogany.** The M's are ideal for adding reddish brown highlights to dull hair, just enough excitement, but very natural. They do not provide complete gray coverage alone.
- C = Ash.** The C's counteract red and brassiness for a cooler, more natural color. Of course, it does not provide complete gray coverage alone.
- DR = Copper Gold.** The DR's add a brighter red to light blonde hair. They will not provide complete gray coverage alone.

**When covering gray hair, you must use some N.** The more gray you have, the more N you should use. **For example:** up to 30% gray use half as much N as your tonal color.  
30% – 60% gray use half and half.  
60% – 100% gray use twice as much N as your tonal color.

To be sure you will love the color, read the directions and do a strand test before coloring your whole head.

Don't forget your bowl and brush for the best application.
